

## FOR IMMEDIATE RELEASE

### Locus Solutions announces the launch of Lifecycle Management Tools for Cognos

IBM Information On Demand, Las Vegas NA, Oct 23, 2011 – Locus Solutions, a Silicon Valley-based business analytics company is proud to announce the launch of Lifecycle Management tools for Cognos. Organizations deploying IBM Cognos based solutions need an integrated end-to-end life-cycle management tools that can help them in three key aspects of application management – development, operations and governance.

Locus's Lifecycle Management Tools for Cognos provides a complete end-to-end Version Management – that can keep track of all your Cognos artifacts over time, Release Management – provides a simple interface to manage and deploy packages from one development to test to production environments, and License management – that manages the Cognos licenses by managing assignment of licenses from one user to another and with built-in alert management to proactively management license compliance.

“We are very excited to announce the launch of the lifecycle management tools for Cognos – we have taken active feedback from several customers to help define the features for this release and feel very confident that tools will be of great value to customers.” said Jeetu Lakhotia, CEO of Locus Solutions.

**About Locus Solutions** Locus Solutions, based in Santa Clara, California, is a strategy and technology consultancy that helps leading companies use advanced performance management, business intelligence and business analytics solutions to achieve competitive advantage and operational excellence.
